Create/Edit Account(Easy)

Module Description

Account Screen (Easy)

You can create an account without the personal information of a hotspot user.

- By default, Easy accounts are valid for all locations.

Fields

Field	Decription
User name	The user name consists of a given User name, @ and the domain name. (example : username@synergsystems.de). It will be used for logging in.
Tariff	You can assign a tariff for your new hotspot users.
Last Name	You can enter the user's name.
Data Sheet	Login data can be downloaded instantly or later, after clicking the Submit button, you will get the login data instantly or you can download it later on (Last column of the table of Account Module).

- Password will be generated according to your given type (The Password field of the Client module (Client Module) in the section Access Identifier).

- If a special password is used, the preferred language should be changed (for downloads),the validity of the account should be restricted or the location or new account (extended) is used to enter personal data of the customer.

There are two link buttons **Account - Search** and **New Account (extended)**, top / below right corner of the screen which redirects to Account Module and Create/Edit Account(Extended) respectively.
