

Custom Options Module

Module Permission According to Roles (Sysadmin, Administrator and Assistant)

Module	Create	Edit	Show	Role
Options	YES	YES	YES	Sysadmin
	NO	NO	NO	Administrator
	NO	NO	NO	Assistant

Module Description

Custom Options are used for options that are used by very few clients, for testing, for debugging etc. Beside that, all custom templates for accounts are stored in the custom_options table.

The table structure allows to set cascading option values for all clients (mandant_id = 0) / specific clients (mandant_id = client_id)
 all entries of a certain type (e.g. table_name = t_standort, table_row_id = 0) / specific (for certain table_row_id)
 where more specific options overwrite more general options.

Options

Apart from the following list, options can be set/checked manually or in the Options Module

Also check inc/options.inc.php /getOptionValue()
 /lib/SyCesDatabase.py/ setOption(), getOption()

Option name	set in	Description
debug_ticket_aruba	-	write debug messages to error_log (self-ticket)
debug_ticket_bintec	-	write debug messages to error_log (self-ticket)
